

# WATT'S THE DIFFERENCE?

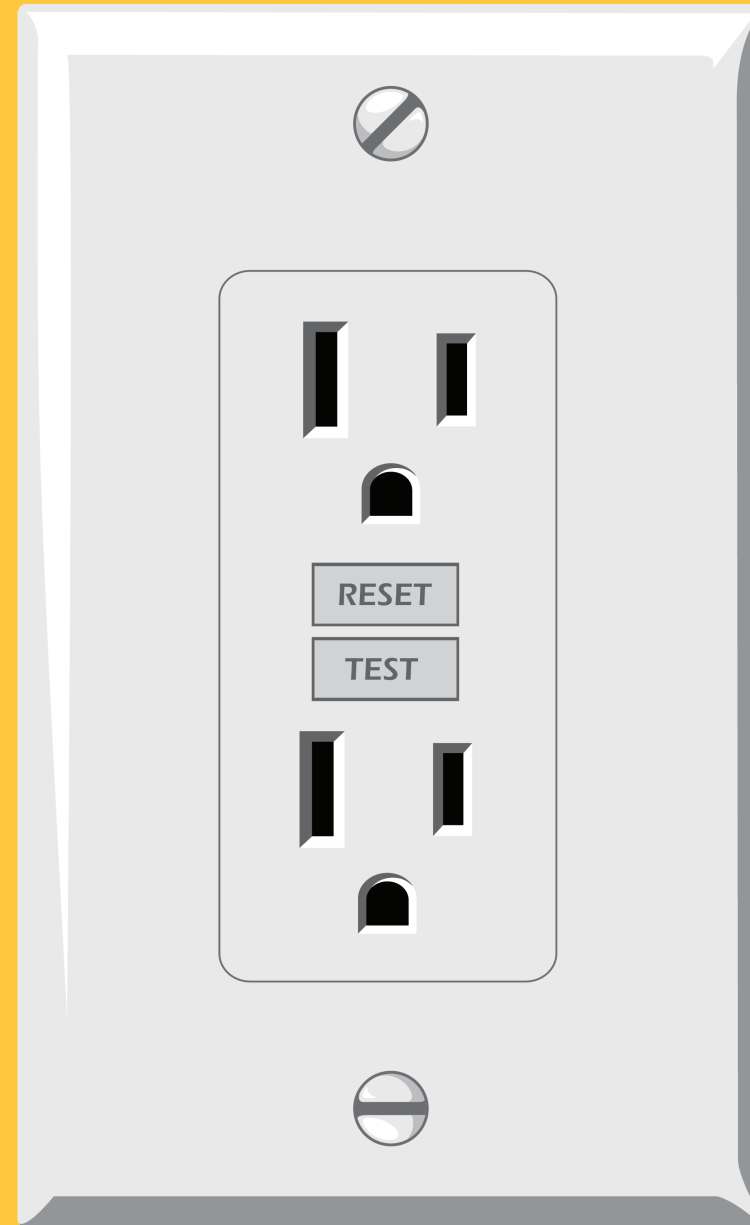

## Ground Fault Circuit Interrupter

Prevents electrical shock by detecting variations in current.

Install in areas where water and electricity are in close proximity.

Test outlets with GFCIs monthly; if they don't work properly, consult your electrician.

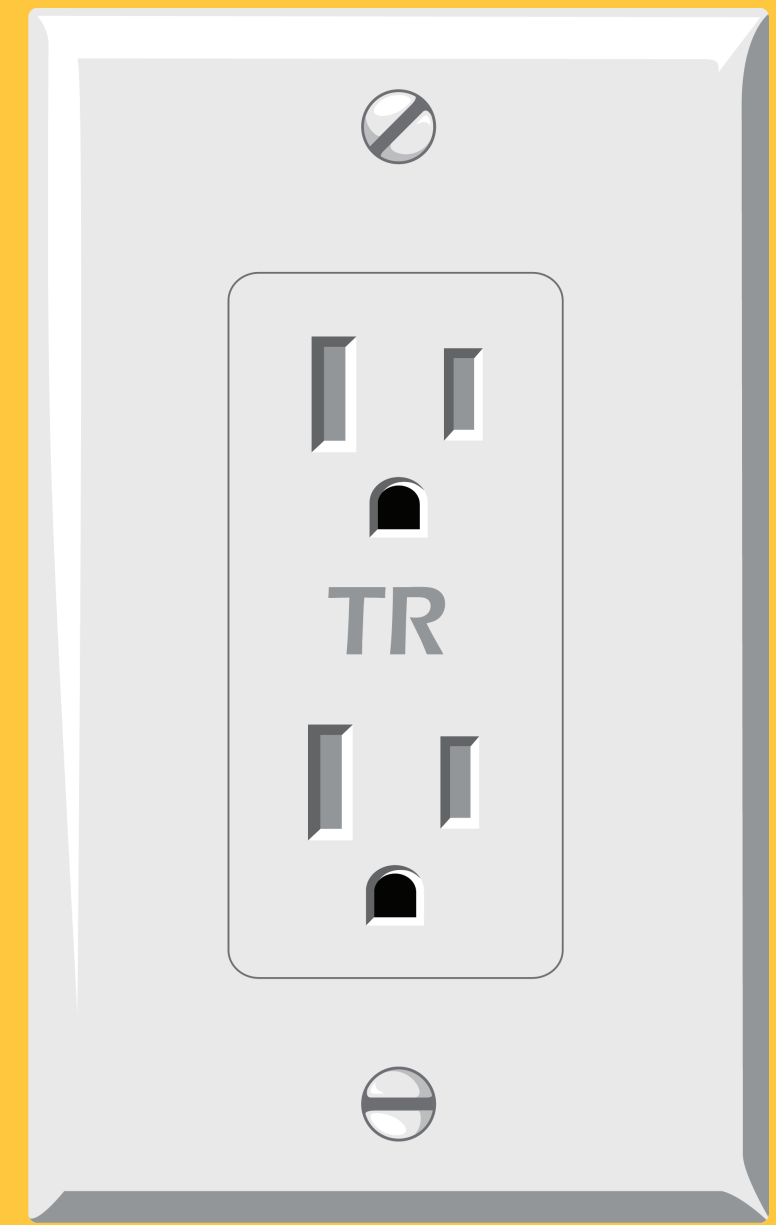

## Arc Fault Circuit Interrupter

Prevents electrical fires caused by arc flash. Usually installed by an electrician.

An arc is an electrical discharge that can cause intense heat or light.

It interrupts the circuit when it detects an arc or other abnormalities in the flow of electricity.

## Tamper Resistant Outlet

Prevents shocks caused by tampering with an outlet.

The protective shutters are designed to move when a plug is correctly inserted.

Became part of the National Electrical Code in 2008; if your home does not have these, install childproof devices.
